Detailed Action

1.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-7 are rejected under 35 U.S.C. 102(e) as being anticipated by Tanno.

With respect to claim 1, Tanno teaches an apparatus (see figure 1 or figure 4) for capturing a series of digital images from the scanner on medium 401 containing a series of visible images comprising a digital camera, (420) a media positioning means 114 and 115, a media illuminating means 110, an imaging station 113 and a means for

Art Unit: 2626

encoding said media for identification of each of the visible images (i.e. for images with distant objects or characters/pictures on a black body, see col. 10, lines 53-64; the improvement comprising means for selectively positioning the camera under the control of a computer 212 and means 228 or 100 for storing information as claimed. See also col. 7, lines 19-25, 44-48, col. 18, lines 22-23 and 33-39.)

With respect to claim 2, Tanno teaches rollers 114 and 115 positioned in camera head in the Y axis with respect to image 410. See also figure 25.

With respect to claim 3, Tanno teaches that the camera is positioned in relation to the Z axis. See the vertical portion of arm 112. See also figure 25.

With respect to claim 4, Tanno teaches rollers 114 and 115 positioned in the camera head in the R axis with respect to image 410. See also fig. 25. See also col. 7, lines 41-47 for panning and tilting of the camera head. See also col. 4, lines 64-69.

With respect to claim 5, see zoom motor 102.

With respect to claim 6, Tanno teaches a method of capturing digital images from a media containing a series of visible images (images 401 or multiple image on 401) comprising positioning said media in relation to a digital camera 420, capturing a digital image from said media utilizing said camera, and 113 and a means for encoding said

Art Unit: 2626

media for identification of each of the visible images (i.e. for images with distant objects or characters/pictures on a black body, see col. 10, lines 53-64; the improvement comprising means for selectively positioning the camera under the control of a computer 212 and means 228 or 100 for storing information as claimed. See also col. 7, lines 19-25, 44-48, col. 18, lines 22-23 and 33-39.)

With respect to claim 7, Tanno teaches certain images can be blotted out from reading . See col. 6, lines 47-55.

2.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Tanno in view of JP 10271274 (hereinafter 274).

Tanno teaches all of the subject matter upon which the claim depends. For example, Tanno shows control part 20 connected to a plurality of device. (274) shows a printer connected to a plurality of sources from which images can be reproduced.

Art Unit: 2626

It would have been obvious to one of ordinary skill in the art to connect a printer to a control port to print digital images as suggested by printer 4 of figure 1 of (274)

1.

Allowed Claims

Claims 9-11 are allowed for the reasons the prior art does not teach in claimed combination, ".... Digital storage means for storing digital data comprising photographic image data derived from said digital camera, data pertaining to the position of said digital camera and data obtained from said input means."

2.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jerome Grant II whose telephone number is 571-272-7463. The examiner can normally be reached on Mon. – Thurs. from 9:00 to 5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kimberly A. Williams, can be reached on 571-272-7471. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
